Experience

Mar. '19 - **Pinterest**, *Senior Product Manager, Social Experiences*

Present

- **Set and evangelize long-term strategy and roadmaps** for social features (sharing, messaging, collaborative boards, comments; previously: internal growth tools) to drive user growth and sticky engagement, including reframing and expanding the team mission to unlock new product spaces and driving 4M+ incremental MAU over four years.
- **Drive high-velocity, end-to-end execution and outcome ownership** by writing high-quality, source-of-truth documentation (PRDs, one-pagers, alignment docs) that clarify goals and expected outcomes, aligning across teams to unblock rapid experimentation, and supporting post-launch iteration based on experiment learnings.
- **Accelerate cross-functional alignment and decision-making** for complex, high-stakes initiatives, such as safety for minors in messaging, by proactively surfacing ambiguity, reconciling requirements, and securing buy-in across engineering, design, data science, legal, trust & safety, product marketing, and executive teams.
- **Mentor and scale early-career PM capacity** by acting as a mentor or de-facto manager for 4 junior PMs, including bringing an apprentice from onboarding through conversion to a full-time PM I, setting goals and providing structured feedback and hands-on coaching across projects, as well as serving on the PM Apprentice hiring committee to raise the bar and ensure strong support structures for new PMs.
- **Leverage AI tools to move quickly**, sizing opportunities, writing documentation, and building and running small experiments to test hypotheses and unblock the broader team.

Jun. '15 - **IXL Learning**, *Product Manager, Family experience and International*

Feb. '19

- **Defined and executed roadmap** in close collaboration with executive team and cross-functional stakeholders, leveraging qualitative and quantitative insights to drive millions of dollars in revenue each year.
- **Optimized membership conversion funnel** and other key surfaces through A/B experimentation in close collaboration with design and engineering.

Education

MS Computer Science, *Stanford University (Concentration: Human-Computer Interaction)*

BS Physics and Computer Science, *Stanford University (Concentration: Human-Computer Interaction)*

Skills

Software: JIRA, Trello, Photoshop, Illustrator, Sketch, Figma, Zeplin, TestRail

Languages and frameworks: HTML, CSS, Javascript, SQL, React, Java, jQuery, Ruby, Rails, PHP, Sass

Human languages: English, conversational Japanese, some French

Passions: Food, education, music, theater, circus, design, community, people, languages, travel
